Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-54, drawn to a semiconductor device, classified in class 257, subclass 712.
- II. Claims 55-60, drawn to a method of making a semiconductor device classified in class 438, subclass 106.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process wherein the working fluid is discharged rather than converted back to liquid phase. .Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Should applicant elect the product claims 1-54 in group I, the following is applicable. This application contains claims directed to the following patentably distinct species of the claimed invention:

1. The species of the claimed invention in claims 1-30 regarding an apparatus comprising an integrated circuit (IC) die; and a thermal mass coupled to the IC die, wherein the thermal mass comprises a stacked microchannel heat exchanger.

2. The species of the claimed invention in claims 31-44 regarding a system comprising an integrated circuit (IC) die; a stacked microchannel heat exchanger operatively and thermally coupled to the IC die; a pump, having an inlet and an outlet, said outlet fluidly coupled to an inlet of the stacked microchannel heat exchanger; and a heat rejecter, having an inlet fluidly coupled to an outlet of the stacked microchannel heat exchanger and an outlet fluidly coupled to the inlet of the pump, wherein the system employs a working fluid that transfers heat generated by the IC die to the heat rejecter using a two-phase heat exchange mechanism.

3. The species of the claimed invention in claims 45-54 regarding a system comprising an integrated circuit (IC) die; a network interface; an antenna coupled to the network interface; a bus, said bus coupling the IC die to the network interface; and a thermal mass coupled to the IC die, the thermal mass comprising a stacked microchannel heat exchanger.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
